

A central illustration featuring a stylized globe with a light blue and white pattern. On top of the globe, there is a green landscape with various sustainable energy symbols: three wind turbines, a factory with two smokestacks emitting green smoke, a solar panel array, and two high-voltage power transmission towers. A bright green sun is positioned above the factory. Two green plant stems with leaves emerge from the sides of the globe. The background is white with several large, semi-transparent circles in shades of light blue and light green. At the bottom, there are wavy, horizontal bands of green and light green, suggesting a landscape or water surface.

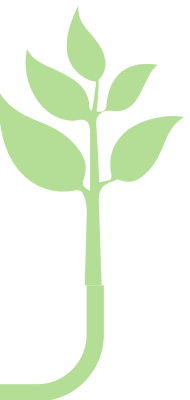

## INDUSTRIA TEXTIL: ALTERNATIVAS SOSTENIBLES

Ing. Johana Delgado  
CIDI UCAB  
Abril 2022

Si bien es cierto que el **algodón** es la fibra natural más importante del mundo textil, también es de las más **contaminantes**

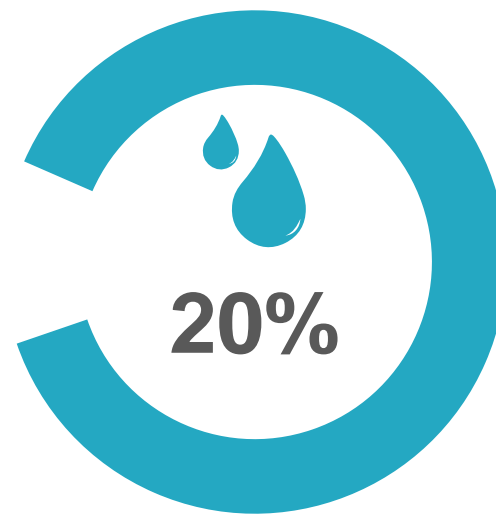

Su **cultivo** se considera de los más **intensivos** por las grandes cantidades de agua, pesticidas y fertilizantes que requiere

La industria textil es uno de los sectores que utiliza **más cantidad de energía, recursos naturales y productos químicos**, generando así una gran contaminación ambiental

La ropa está compuesta de **poliéster** creado a partir de **procesos tóxicos**

Contaminación del **agua** se debe al procesamiento de textiles

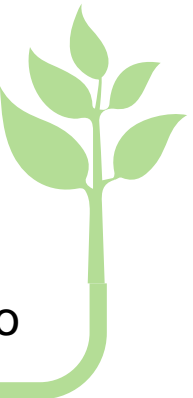

Dos de los materiales más “sucios”; utilizan una amplia gama de pesticidas, agua y energía en la producción

Soluciones potenciales para una industria de la **moda más circular y sostenible**

Colaboraciones conscientes creadas para **cerrar la brecha** entre la moda y otras industrias

## **TEXTILES SOSTENIBLES**

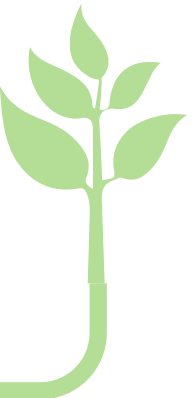

hechos de materiales que pueden ser usados para producir fibras ecológicas con baja huella de carbono

Los **tejidos sostenibles** son aquellos capaces de conseguir los Objetivos de Desarrollo Sostenible, marcados por acuerdos internacionales, como los del Acuerdo de París y la agenda europea para alcanzar **la neutralidad climática** en 2050

Estos son por lo tanto aquellos de origen natural, que **no** utilizan ningún **componente químico** que pueda dañar el medioambiente

**El mundo de la moda sostenible es muy extenso:**  
distintos «grados» de sostenibilidad

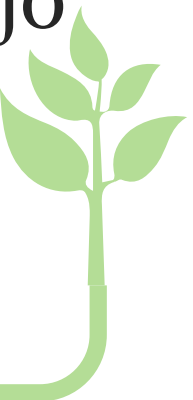

Surge interés en el mundo en utilizar fibra textil natural de **fuentes alternativas**, producto de la investigación ambiental, para reducir de forma significativa los residuos y disminuir el **impacto ecológico**

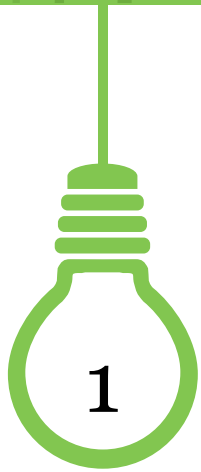

Algunos **textiles éticos** principales y las alternativas de bajo impacto

para la seda, el cuero, la lana, el algodón y otros

# Alternativas sostenibles

**MICROSIL**

**PIÑATEX**

**TENCEL**

**ZOA**

# MICROSILK

Bolt Threads & Stella McCartney (2017)

## 01

Estudiar las proteínas de seda hiladas por arañas para determinar qué les da sus propiedades

Aislar y purificar la proteína de seda, convertir en fibras, similares a las del rayón y el acrílico

Desarrollar proteínas inspiradas en estas sedas naturales mediante el uso de bioingeniería para poner genes en la levadura

Producir la proteína en grandes cantidades a través de la fermentación, utilizando levadura, azúcar y agua

- ❑ Alta resistencia a la tracción, elasticidad, durabilidad y suavidad
- ❑ Tecnología para replicar de manera sostenible el proceso a gran escala
- ❑ Se puede producir con un impacto ambiental menor que la fabricación textil tradicional
- ❑ Biodegradación al final de su vida útil

# PIÑATEX

Dra. Carmen Hijosa x Ananas Anam Ltd (90's)

## 02

Después de la cosecha de la piña, las hojas adecuadas de la planta que quedan se recogen en manojos y las fibras largas se extraen con máquinas semiautomáticas

Esta fibra de hoja de piña (PALF) similar a la pelusa se mezcla con un ácido poliláctico (PLA) a base de maíz y se somete a un proceso mecánico para crear Piñafelt, una malla no tejida que forma la base de todas las colecciones de Piñatex.

Las fibras se lavan y luego se secan naturalmente al sol, o durante la temporada de lluvias en hornos de secado

Las fibras secas pasan por un proceso de purificación para eliminar cualquier impureza que da como resultado un material similar a la pelusa

- ❑ Material natural, de origen sostenible y libre de crueldad
- ❑ Hecho de fibra de las hojas de desecho de la planta de la piña: son un subproducto de la cosecha de piña existente, por lo que la materia prima no requiere recursos ambientales adicionales para producir y su uso crea un flujo de ingresos adicional para las comunidades agrícolas
- ❑ Es apto para su uso en moda, accesorios y tapicería y ha sido utilizado por más de 1000 marcas en todo el mundo, incluidas Hugo Boss, H&M y Hilton Hotel Bankside

# 03

Transforma la pulpa de madera en fibras celulósicas con alta eficiencia de recursos y bajo impacto ambiental

Conocidas por su comodidad natural, las fibras TENCEL™ Lyocell son versátiles y se pueden combinar con una amplia gama de fibras textiles como algodón, poliéster, acrílico, lana y seda para mejorar la estética y la funcionalidad de los tejidos

Las propiedades físicas únicas de las fibras TENCEL™ Lyocell conducen a su gran resistencia, absorción eficiente de la humedad y suavidad para la piel

Origen botánico, producción sostenible, suave para la piel, suavidad duradera, contribuye a la transpirabilidad, retención del color y biodegradabilidad.

## TENCEL

1982-2018

- ❑ Proviene de la madera que se extrae de bosques gestionados de forma sostenible
- ❑ Es más absorbente que el algodón, más suave que la seda y más fresco que el lino
- ❑ Se puede lavar a máquina; características fuertes, suaves, absorbentes y resistentes a las arrugas
- ❑ Proceso de fabricación de circuito cerrado: el 99,95 % del agua y los disolventes utilizados en la producción se recuperan, reciclan y vuelven a utilizar
- ❑ Totalmente biodegradables

# 04

1ra. generación de materiales creados con la proteína esencial de la naturaleza, el colágeno, pero cultivados completamente sin derivados animales

Flexibles y duradero:s los materiales de cuero biofabricado abren nuevas posibilidades en el diseño y la fabricación que no son posibles con el cuero tradicional

Modern Meadow, 2018

- ❑ Primera marca de material de biocuero del mundo
- ❑ Capaz de ser de cualquier densidad. Sujeta a cualquier molde. Crea cualquier forma. Toma cualquier textura.
- ❑ Se puede combinar con cualquier otro material: Sea de cualquier tamaño
- ❑ Completamente biofabricado

## RESPONSABILIDAD

Los usuarios demandan constantemente la **responsabilidad medioambiental de las marcas**, lo que obliga a todos los sectores a adaptarse a un mundo que busca su sostenibilidad

Los textiles sostenibles son una estrategia perfecta para el logro de los ODS, ya que han sido creados a través de prácticas responsables con el medioambiente y las personas

Cada vez son más las opciones de materias primas que permite la producción de tejidos sostenibles, que invitan a crear un comercio justo con el medioambiente de acuerdo con principios de sostenibilidad económica, social y ecológica.

Utilizar tejidos ecológicos aporta beneficios tanto para los **seres vivos como para el medioambiente**

Estos no utilizan productos químicos nocivos, por lo tanto, su producción no perjudica al agua potable

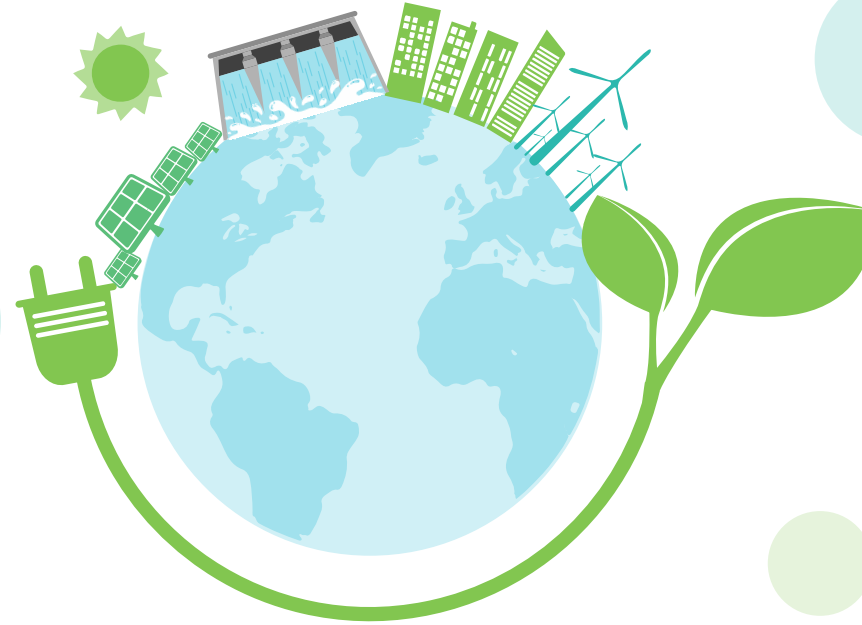

**Se biodegradan naturalmente con el tiempo**, al contrario que los tejidos no sostenibles

Los tejidos sostenibles son más suaves y mantienen el olor durante más tiempo

Las alergias en la piel se ven reducidas
